# GREAT DANE CLUB OF AMERICA National Health Survey 

By Margaret R. Slater, DVM, PhD<br>With invaluable assistance from: Jacque Harbison, MS \& Norma de Anda

Mary Anne Zanetos (Contact person regarding this GDCA Survey) Chairman, GDCA Health Survey Committee
MAZ850@aol.com (614) 451-2297

## INTRODUCTION

In 1999, The Great Dane Club of America (GDCA) circulated a Request for Proposals for a breed health survey. We (at Texas A\&M University) were notified in October 1999 that our proposal was selected and we would be working with the club. The purpose of the survey was to accurately determine the prevalence of specific health problems and identify health and welfare issues of greatest concern to the breed. Survey results could then be used to guide the activities of the GDCA Health and Welfare Committee and to target research funds toward programs which have the best chance for improving the health and quality of life of Great Danes. In order to assure confidentiality, surveys were distributed, collected and analyzed by myself and research assistants at Texas A\&M University College of Veterinary Medicine.

The survey was developed with extensive input from the GDCA, especially Mary Anne Zanetos, between April 2000 and September 2001. The survey consisted of two parts. Part 1 was intended to obtain information on how owners feed, care for and enjoy activities with the Great Danes living in their household. Also included were detailed questions on veterinary and husbandry practices such as feeding, preventive care, health screening and perceptions regarding the overall health of Great Danes vs. Great Danes in the respondents' household. Part 2 consisted of a very detailed health history that was to be completed for individual Great Danes who were currently living in the owner's household at the time of survey and who died while living in the household in the past five years. These dogs are defined as "eligible dogs" for the survey. Respondents were asked to include all eligible dogs in Part 2.

## SURVEY ADMINISTRATION

The survey was sent to three targeted groups: 1) GDCA; 2) Affiliate Clubs and 3) a random sample of AKC registered dog owners. Surveys were coded for tracking response rates and mailed individually to all GDCA member households, along with pre-paid envelopes for returning the survey in December 2001. These surveys were confidential since my laboratory maintained a list of respondents. Reminder post cards were sent to non-responders in April 2002. After discussion, the club decided not to pursue additional individual reminders. Surveys were also available for all GDCA and Affiliate club members at the National meeting in October 2002.

Members of affiliate Great Dane clubs received surveys through their club secretaries who were sent packets of surveys and instructions so that affiliate clubs could hold programs to present the survey and encourage participation. The surveys were coded so that we could tell they were from Affiliate clubs, but the responses were anonymous since there was no list to match between the name/address and the code. The initial mailing was in October 2001. Club secretaries were sent reminders in March 2002 for announcing in the April meetings. Several new clubs responded to the request for participation in April 2002. A letter was mailed to all Club Presidents and Secretaries in the fall of 2002. A final notice was published in the GDCA

Bulletin in January of 2003. A few more requests for surveys were received as a result in March 2003.

Surveys and prepaid return envelopes were mailed to a random sample of 2000 owners of AKC registered Great Danes in March 2002. This group was based on registrations issued from 1992 to 1997. While these surveys had a code number for tracking response rates, only Furst Direct, working with the AKC, had the list. After initially planning to provide a reminder postcard, the club decided to redirect the resources toward pursuing Affiliate member responses.

## SURVEY RESULTS

Preliminary survey results were reported at the GDCA National Specialty Show in 2002. At that time it was decided to continue to encourage participation and extend the period for data collection through June 2003.

A total of 519 households and 1565 individual Great Danes are included in the final tabulations. Complete results will be reported on the GDCA website (www.gdca.org). Excerpts and special topics from the survey will be published in Dane World Magazine in 2004.

Diagram Showing Great Danes Included in Survey, by Sex and Reproductive Status.
Responses were summarized by means (the average) and medians (the middle number in the group of responses), minimums and maximums for continuous variables such as age and number of litters. For categorical variables, like the disease presence or absence, the total number and percentages were used.

Some data were compared using statistical tests. Because some of the data were not normally distributed, non-parametric statistical tests were used for continuous variables (for age compared to respondent group, Kruskal-Wallis ANOVA was used). For variables that were categorical, such as respondent group and presence or absence of a health problem, the chisquare test was used. A p-value less than 0.05 was considered to be statistically significant.

## PART 1: Demographics, Husbandry and Veterinary Practices

## Table 1: Summary of Survey Returns and Response Rates

|  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Respondent Group | Surveys Mailed | Valid Address | Surveys Returned | Response Rate |
| Affiliate Club Members ${ }^{(a)}$ | 1025 | 1025 | 226 | 22\% |
| $\begin{aligned} & \text { GDCA } \\ & \text { Members }^{(\mathrm{b})} \end{aligned}$ | 592 | 580 | 149 | 26\% |
| AKC Random Sample ${ }^{\text {(c) }}$ | 2000 | 1999 | 144 | 7\% |
| Total ${ }^{(d)}$ | 3617 | 3604 | 519 | 14\% |
| Respondent Group | Number of Great Danes | Percentage of Great Danes in Survey |  |  |
| Affiliate Club Members | 676 | 43\% |  |  |
| GDCA Members | 513 | 33\% |  |  |
| AKC Random Sample | 376 | 24\% |  |  |
| Total | 1565 | 100\% |  |  |

${ }^{\text {(a) }}$ Affiliate club members' surveys were distributed through their club secretary in order to maintain anonymity of distribution and returns. Households with no Great Danes in residence within the past 5 years were eliminated, prior to distribution and are not counted in the number of surveys mailed. Club secretaries used their discretion as to how to distribute to their members. Surveys were handed out at meetings, mailed to absent members and in some cases were mailed to the entire club.
${ }^{(b)}$ Survey forms were mailed by an outside contractor, Dr. Margaret Slater, Texas A\&M University, to GDCA member households based on the 2002 GDCA membership roster. One survey was mailed per household regardless of how many members resided there. Surveys with invalid addresses were not included in response rates.
(c) AKC sample was selected and mailed by an outside contractor, Furst Direct. Households were randomly selected based on AKC registration of a Great Dane during the 1992-97. Household addresses on the mailing list were verified, prior to mailing, by the US Postal Service.
${ }^{(d)}$ In case multiple surveys were received, respondents were asked to return surveys in the following order of preference: GDCA, affiliate, AKC. For example, a GDCA member who received a survey as part of the AKC sample would fill out and return their GDCA survey. The AKC survey would be returned blank with a notation that the respondent had returned a survey as a GDCA member. To avoid duplicate individual dog data, dogs with multiple owners were to be reported on by the custodial owner only. For GDCA and AKC samples, owners who did not have any eligible dogs were included in the list as mailed and received but not in any further tabulations.

## Table 2: Summary of Dog Ownership Patterns

|  | Minimum Dogs per Household $^{(a)}$ | Maximum Dogs per Household ${ }^{(a)}$ | Mean Number of Dogs per Household | Median Number of Dogs per Household | Statistical Significance ${ }^{(b)}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Respondent Group |  |  |  |  |  |
| Affiliate Club Members | 0 | 12 | 3.0 | 2 |  |
| GDCA <br> Members | 0 | 24 | 3.4 | 3 |  |
| AKC Random Sample | 0 | 14 | 2.6 | 2 | AKC fewer dogs/household than GDCA |
|  |  |  |  |  |  |
| Total | 0 | 24 | 3.0 | 2 | $\mathrm{P}<0.001$ |
|  | Minimum Length of Dane Ownership (years) | Maximum Length of Ownership (years) | Mean Length of Ownership (years) | Median Length of Ownership (years) |  |
| Respondent Group |  |  |  |  |  |
| Affiliate Club Members | 0.8 | 53 | 16 | 14 | Affiliate households owned Danes shorter time than either AKC or GDCA households |
| GDCA <br> Members | 2 | 54 | 22 | 22 |  |
| AKC Random Sample | 1 | 50 | 20 | 20 |  |
| Total | 0.8 | 54 | 19 | 19 | $\mathrm{P}<0.001$ |

(a) Includes both adult Great Danes and puppies. There were 12 households with no currently owned dogs but which had eligible dogs that died during the study period.
(b) Kruskal-Wallis non-parametric ANOVA was used to compare these variables

## Table 3: Great Dane Involvement and Activities (519 Survey Households)

| Types of Dog <br> Involvement | Pet Owner | Breeder | Exhibitor | Comment |
| :--- | :---: | :---: | :---: | :---: |
| 519 households | $198(38 \%)$ | $243(47 \%)$ | $332(64 \%)$ | Could choose >1 <br> category |
|  | Rescue | Trainer | Other |  |
|  | $75(14 \%)$ | $44(8 \%)$ | $132(25 \%)$ | Could choose >1 <br> category |
| Involvement in <br> Performance <br> Events | Obedience | Agility | Other | Any <br> Performance <br> Event |
| 519 Households | $102(20 \%)$ | $35(7 \%)$ | $41(8 \%)$ | $129(25 \%)$ |
| Living <br> Conditions of <br> Dogs | In Family Home | In Separate <br> Kennel |  |  |
| 519 | Combination | Missing |  |  |
|  | $401(77 \%)$ | $14(3 \%)$ | $100(19 \%)$ | $4(1 \%)$ |

(a) Comment: Significantly fewer households in AKC sample reported housing Great Danes in family home ( $p<0.001$ ). A chi-square test was used for this analysis.

| Involvement <br> and <br> Performance $^{(\mathbf{a})}$ | AKC <br> Sample <br> $\mathbf{n = 1 4 4}$ | Percent <br> Yes | Affiliate <br> Club <br> Members <br> $\mathbf{n = 2 2 6}$ | Percent <br> Yes | GDCA <br> Members <br> $\mathbf{n = 1 4 9}$ | Percent <br> Yes | Total <br> Yes | P- <br> values |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Pet owner | 90 | 63 | 84 | 38 | 24 | 16 | 198 | $<0.0001$ |
| Breeder | 53 | 37 | 97 | 43 | 93 | 62 | 242 | $<0.0001$ |
| Exhibitor | 45 | 31 | 160 | 71 | 127 | 85 | 332 | $<0.0001$ |
| Rescue | 13 | 9 | 35 | 16 | 27 | 18 | 75 | 0.07 |
| Trainer | 8 | 6 | 21 | 7 | 15 | 14 | 44 | 0.01 |
| Other | 23 | 16 | 56 | 25 | 53 | 36 | 132 | 0.0006 |
| Obedience | 19 | 13 | 46 | 20 | 37 | 25 | 102 | 0.04 |
| Agility | 6 | 4 | 19 | 8 | 10 | 7 | 35 | 0.3 |
| Any <br> Performance <br> Event | 20 | 14 | 53 | 24 | 41 | 28 | 114 | 0.01 |

Table 4: Great Dane Involvement and Performance Activities, by Respondent Group
(a) Respondents could select more than one category.

The AKC sample had significantly fewer breeders, exhibitors, obedience or any performance event. GDCA had a lower percentage of pet owners than the other groups.

## Table 5: Feeding Practices and Product Use (519 Survey Households)

| Types of Dog Food Used | Dry Kibble ${ }^{\text {(a) }}$ | Canned | Frozen ${ }^{\text {(b) }}$ | Raw or BARF | Other ${ }^{(c)}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| (could answer more than one) | 485 (93\%) | 204 (39\%) | 55 (11\%) | 64 (12\%) | 80 (15\%) |
|  | Yes ${ }^{(d)}$ | No or Not Applicable |  |  |  |
| Uses Same Adult Food for Puppies | 308 (59\%) | 211 (41\%) |  |  |  |
|  |  |  |  |  |  |
| Feeding Schedule | Dogs Fed at Set Times | Food Available at All Times | Missing/No Answer |  |  |
|  | 454 (88\%) | 58 (11\%) | 7 (1\%) |  |  |
|  | Yes | No |  |  |  |
| Use of Most Common Nutritional Supplements ${ }^{(e)}$ | 299 (58\%) | 220 (42\%) |  |  |  |
| Vitamin C | 175 (34\%) |  |  |  |  |
| Vitamin E | 62 (12\%) |  |  |  |  |
| Glucosamine | 47 (9\%) |  |  |  |  |
| Fish Oil | 25 (5\%) |  |  |  |  |
| Chondroitin | 23 (4\%) |  |  |  |  |
|  |  |  |  |  |  |

${ }^{(a)}$ Top five dry kibble products, by number of households using: (\#1) Purina Pro Plan: 57; (\#2) Eagle: 53; (\#3) Eukanuba: 48; (\#4) lams: 42; and (\#5) Nutro: 40.
${ }^{(b)}$ Frozen Food Brands, by number of households using: (\#1) Bil-Jac: 25; (\#2) Steve's Real Food: 4; (\#3) Abady: 3.
${ }^{(c)}$ Other includes various homemade diets other than Raw/BARF. Some included raw meat items, but owners did not select the Raw/BARF category. See Table A2 in Appendix for a detailed list.
${ }^{(d)}$ Top five brands of puppy food, in order of frequency: (\#1) Purina; (\#2) lams; (\#3) Eukanuba; (\#4) Eagle; (\#5) Science Diet. See Table A2 in Appendix for a detailed listing.
${ }^{(e)}$ See Table A3 in the Appendix for a complete listing.

## Table 6: Use of Nutritional Supplements, by Respondent Group

|  |  |  |  |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Supplement | AKC <br> Sample | $\%$ | Affiliate <br> Club <br> Members | $\%$ | GDCA <br> Members | $\%$ | Total | $\%$ | p-value |
|  | $\mathbf{N = 1 4 4}$ |  | $\mathbf{N = 2 2 6}$ |  | $\mathbf{N = 1 4 9}$ |  | $\mathbf{N}=519$ |  |  |
|  |  |  |  |  |  |  |  |  |  |
| Vitamin C | 25 | $17 \%$ | 97 | $43 \%$ | 54 | $36 \%$ | 176 | $34 \%$ | $<0.0001^{(\mathrm{al}}$ |
| Vitamin E | 10 | $7 \%$ | 32 | $14 \%$ | 17 | $11 \%$ | 59 | $11 \%$ | 0.13 |
| B complex | 2 | $1 \%$ | 8 | $4 \%$ | 3 | $2 \%$ | 13 | $3 \%$ | 0.34 |
| MSM | 3 | $2 \%$ | 19 | $8 \%$ | 8 | $5 \%$ | 30 | $6 \%$ | $0.04^{(\mathrm{bl}}$ |
| Flaxseed <br> Meal | 3 | $2 \%$ | 8 | $4 \%$ | 2 | $1 \%$ | 13 | $3 \%$ | 0.34 |
| Probiotics | 0 | $0 \%$ | 8 | $4 \%$ | 8 | $5 \%$ | 16 | $3 \%$ | $0.02^{(\mathrm{cl})}$ |
| Digestive <br> Enzymes | 2 | $1 \%$ | 12 | $5 \%$ | 10 | $7 \%$ | 24 | $5 \%$ | 0.08 |
| Glucosamine | 5 | $3 \%$ | 23 | $10 \%$ | 18 | $12 \%$ | 46 | $9 \%$ | $0.02^{(\mathrm{d})}$ |
| Fish Oil | 4 | $3 \%$ | 15 | $7 \%$ | 6 | $4 \%$ | 25 | $5 \%$ | 0.2 |
| Chondroitin | 2 | $1 \%$ | 20 | $9 \%$ | 10 | $7 \%$ | 32 | $6 \%$ | $0.01^{(\mathrm{el})}$ |

(a)

Affiliate club and GDCA members were far more likely to use Vitamin $\mathbf{C}$ than were the AKC sample households. This difference was highly significant statistically ( $\mathrm{p}<0.0001$ ).
(b) Affiliate club and GDCA members were more likely to use MSM than were the AKC sample households. This difference is less marked than for Vitamin C, with $8 \%$ and $5 \%$ vs. $2 \%$, of households, respectively, giving Great Danes Vitamin C. This difference was significant statistically ( $\mathrm{p}=0.04$ ).
(c) Affiliate club and GDCA members were more likely to use Probiotics than were the AKC sample households. None of the AKC households used probiotics vs. $4 \%$ and $5 \%$ of Affiliate and GDCA households, respectively. This difference was significant statistically ( $p=0.02$ ).
(d) Affiliate club and GDCA members were far more likely to use Glucosamine than were the AKC sample households. $10 \%$ and $12 \%$ of Affiliate and GDCA club households, respectively, used this joint health supplement vs. $3 \%$ of the AKC households. This difference was significant statistically ( $\mathrm{p}=0.02$ ).
(e) Affiliate club and GDCA members were far more likely to use Chondroitin than were the AKC sample households. Only $1 \%$ of the AKC household reported using the joint supplement, chondroitin, vs. $9 \%$ and $7 \%$, of Affiliate and GDCA households, respectively. This difference which was significant statistically ( $\mathrm{p}=0.01$ ).

Overall, GDCA and Affiliate Club members tended to give their dogs more supplements than AKC respondents. See Table A3 in the Appendix for a complete list of all supplements.

## Table 7: Vaccination Attitudes and Practices

|  | $\begin{gathered} \text { Number (\%) } \\ \text { of } \\ \text { Responses } \\ \hline \end{gathered}$ | $\begin{aligned} & \text { Number (\%) } \\ & \text { of } \\ & \text { Responses } \end{aligned}$ | $\begin{gathered} \text { Number (\%) } \\ \text { of } \\ \text { Responses } \\ \hline \end{gathered}$ |  |  |

| Total | 519 | 100\% |  |  |  |

## Table 7 (cont'd)

| Frequency of <br> Adult Booster <br> Shots (other than <br> rabies) | Number | Percent | Parvo as a <br> Separate <br> Vaccination? | 269 yes <br> $62 \%$ (of 434) |
| :--- | :---: | :---: | :---: | :---: |
| None | 64 | $12 \%$ |  |  |
| Once a Year | 275 | $54 \%$ |  |  |
| Once Every 1-2 <br> Years | 111 | $21 \%$ |  |  |
| Other | 48 | $9 \%$ |  |  |
| No Answer/Not <br> Applicable | 21 | $4 \%$ |  | No Information |
| Total | 519 <br> Modified <br> Live | Killed | Both | 49 |
| Type of Vaccine | 108 | 85 | 192 |  |
|  |  |  |  |  |

Table 7 (Cont'd).

| Frequency <br> of Rabies <br> Vaccination | Number | Percent |
| :--- | :---: | :---: |
| None/Not at <br> All | 37 | $7 \%$ |
| Once a Year | 158 | $30 \%$ |
| Once Every 2 <br> Years | 71 | $14 \%$ |
| Once Every 3 <br> Years | 227 | $44 \%$ |
| Other | 12 | $2 \%$ |
| No <br> Answer/Not <br> Applicable | 14 | $3 \%$ |
| Total | 519 | $100 \%$ |

(a) 434 indicated that they gave booster vaccinations at all. 461 respondents provided answers to the questions about whether they or the veterinarian vaccinates the dogs. The difference is partly due to respondents giving a single vaccination to a puppy.

The finding that $12 \%$ of the respondents report not vaccinating at all demonstrates the impact of the anti-vaccine movement, even among relatively experienced dog owners. However, a small but noticeable percentage of households take the other extreme. They are giving puppies booster vaccinations every 2-3 weeks of their lives until they are 4 months old. There is no scientific evidence to support that using vaccines more often than label recommendations is protective. And recent vaccination discussion might suggest that overly frequent boosters could be harmful.

The frequency of rabies vaccinations is regulated by the state for the majority of locations in the US. And most states use a three year vaccine after the initial one year booster.

## Table 8: Use of Preventive Products and Services

|  | $\begin{aligned} & \text { Users } \\ & \text { (of } 519 \text { ) } \end{aligned}$ | Users (of 519) | Users (of 519) |  |

| 9. | 9.Eye Problems | 9.Wobbler's | 9.Short Lifespan |
| 10. | 10.Thyroid | 10. | 10.Wobbler's |
| (a) Four reasons tied for <br> (b) Two reasons tied for | Four reasons tied for $4^{\text {th }}$ place. |  |  |

(c) Three problems in Owners' Household were related to heart disease (cardiomyopathy, heart failure, heart problems) and were combined into a single category.
(d) Two of the Top 10 Problems as a Breed were related to heart disease (cardiomyopathy, heart problems), so were combined into a single category. Responses as stated are also shown.

Table 11: Top 10 Health Problems in Own Household vs. Breed, by Respondent Group.

| As Listed by <br> Respondents | AKC Sample |  | GDCA |  | Affiliates |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| In Own Household | $\mathbf{( N = 1 4 4 )}$ | $\%$ | $\mathbf{( N = 1 4 9 )}$ | $\%$ | $\mathbf{( N = 2 2 5 )}$ | $\%$ | Total |  |
|  |  |  |  |  |  |  |  |  |
| Bloat | 40 | $28 \%$ | 53 | $36 \%$ | 60 | $27 \%$ | 153 | 0.16 |
| Cardiomyopathy/Heart <br> Problem | 24 | $17 \%$ | 25 | $17 \%$ | 43 | $19 \%$ | 92 | 0.8 |
| Cancer | 20 | $14 \%$ | 24 | $16 \%$ | 38 | $17 \%$ | 82 | 0.7 |
| Arthritis | 17 | $12 \%$ | 16 | $11 \%$ | 24 | $11 \%$ | 57 | 0.9 |
| Allergies | 16 | $11 \%$ | 14 | $9 \%$ | 23 | $10 \%$ | 53 | 0.8 |
| Thyroid | 5 | $3 \%$ | 12 | $8 \%$ | 19 | $8 \%$ | 36 | 0.15 |
| Torsion | 6 | $4 \%$ | 16 | $11 \%$ | 14 | $6 \%$ | 36 | 0.07 |
| Eyes | 8 | $6 \%$ | 11 | $7 \%$ | 10 | $4 \%$ | 29 | 0.5 |
| Joint | 13 | $9 \%$ | 6 | $4 \%$ | 7 | $3 \%$ | 26 | 0.15 |
| Digestion | 7 | $5 \%$ | 2 | $1 \%$ | 13 | $6 \%$ | 22 | 0.1 |
|  |  |  |  |  |  |  |  |  |
| In Breed | 81 | $56 \%$ | 113 | $76 \%$ | 128 | $57 \%$ | 322 | 0.0002 |
| Bloat | 59 | $41 \%$ | 80 | $54 \%$ | 123 | $55 \%$ | 262 | 0.01 |
| Cardiomyopathy/Heart |  |  |  |  |  |  |  |  |
| Problem |  |  |  |  |  |  |  |  |
| Cancer | 31 | $22 \%$ | 47 | $32 \%$ | 62 | $28 \%$ | 140 | 0.15 |
| Hip Dysplasia | 20 | $14 \%$ | 15 | $10 \%$ | 24 | $11 \%$ | 59 | 0.5 |
| Joint | 14 | $10 \%$ | 9 | $6 \%$ | 26 | $12 \%$ | 49 | 0.2 |
| Torsion | 10 | $7 \%$ | 20 | $13 \%$ | 17 | $8 \%$ | 47 | 0.09 |
| Thyroid | 9 | $6 \%$ | 15 | $10 \%$ | 19 | $8 \%$ | 43 | 0.5 |
| Longevity | 9 | $6 \%$ | 11 | $7 \%$ | 15 | $7 \%$ | 35 | 0.9 |
| Wobblers | 11 | $8 \%$ | 5 | $3 \%$ | 14 | $6 \%$ | 30 | 0.3 |
| Arthritis | 8 | $6 \%$ | 5 | $3 \%$ | 11 | $5 \%$ | 24 | 0.7 |

Hip dysplasia in the "breed" list may reflect the emphasis on hip screening as a method used by the more health conscious breeders as opposed to a serious/prevalent problem in today's Great Danes. It may also be reflected as arthritis in the "own dog" list. Allergies and eye problems are notably absent in the "breed problems, yet are $5^{\text {th }}$ and $7^{\text {th }}$ in the "own dog" list.

Bloat as a breed problem was significantly more common as a response by GDCA members. Heart problems as a breed problem was significantly less common among the AKC respondents.

## PART 2: Health History of Individual Dogs

The number of dogs reported in Part 1 did not always equal the number of individual dog data sheets returned in the survey. The following data includes only information from the individual dog components of the survey in Part 2 (1564 dogs).

## Table 12: Individual Dogs: Demographic Information

${ }^{(a)}$ Individual Dog Forms were to be filled out for dogs over 6 months. Information on puppies less than 6 months was collected as part of the reproductive history of the puppy's dam.

Table 13: Deaths, by Cause and Gender

| Cause Of Death | Total <br> Number of <br> Deaths | Number <br> of Male <br> Deaths | Percent <br> of Male <br> Deaths | Number <br> of <br> Female <br> Deaths | Percent of <br> Female <br> Deaths |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Cancer, Other /Tumor | 66 | 25 | $12 \%$ | 41 | $17 \%$ |
| Heart Failure/Other Heart | 40 | 25 | $12 \%$ | 15 | $6 \%$ |
| Bloat | 38 | 16 | $8 \%$ | 22 | $9 \%$ |
| Euthanasia | 36 | 18 | $9 \%$ | 18 | $7 \%$ |
| Bone Cancer | 27 | 10 | $5 \%$ | 17 | $7 \%$ |
| Cardiomyopathy (a) | 25 | 12 | $6 \%$ | 13 | $5 \%$ |
| Bloat with Torsion (GDV)(b) | 23 | 12 | $6 \%$ | 11 | $5 \%$ |
| Accident/Trauma | 18 | 7 | $3 \%$ | 11 | $5 \%$ |
| Post-Surgical. Complication(c) | 12 | 2 | $0.9 \%$ | 10 | $4 \%$ |
| Renal Disease/Failure | 10 | 6 | $3 \%$ | 4 | $2 \%$ |
| Euthanized for Temperament | 6 | 5 | $2 \%$ | 1 | $0.4 \%$ |
| Splenic Torsion | 5 | 2 | $0.9 \%$ | 3 | $1 \%$ |
| Sudden or Unexplained Death | 3 | 0 | $0 \%$ | 3 | $1 \%$ |
| Missing/Unknown | 71 | 33 | $16 \%$ | 38 | $15 \%$ |
| Other | 72 | 33 | $16 \%$ | 39 | $16 \%$ |
|  |  |  |  |  |  |
| Total Deaths | 452 | 206 | $100.0 \%$ | 246 | $100.0 \%$ |
|  |  |  |  |  |  |

${ }^{(a)}$ Only includes responses specified as cardiomyopathy.
${ }^{(b)}$ GDV: Gastric Dilation Volvulus (Gastric Torsion)
${ }^{(c)}$ Includes surgical emergencies: shock, DIC, blood clot, stroke, etc.

## Table 14: Causes of Death, Comparing Males and Females

(a) Includes dogs euthanized due to old age, terminal illness, paralysis, etc.

Rankings for males vs. females for most causes of death were fairly similar. Heart disease was the most frequent cause of death among males whereas among females, cancer was the most common cause of death.

Table 15: Health Problems, by Body System

|  | Number of Cases | Percent Affected (of 1564) | Average Age at Onset (years) | Median Age at Onset (years) | Minimum Age at Onset (years) | Maximum Age at Onset (years) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1. Eyes and Ears |  |  |  |  |  |  |

| :--- | :--- | :--- | :--- | :--- |

Table 17: Common Health Problems (> 3\% of all dogs) Analyzed by Gender

| Health Problem |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total Number of Cases | Number of Males | \% Males | Number of Females | \% Females | P -value |
| Arthritis | 212 | 79 | 37\% | 133 | 63\% | 0.3 |
| Acne | 228 | 93 | 41\% | 135 | 59\% | 0.002 |
| Aggressive to dogs | 184 | 69 | 38\% | 115 | 63\% | 0.7 |
| Bloat with torsion | 172 | 77 | 45\% | 95 | 55\% | 0.7 |
| Allergies | 160 | 75 | 47\% | 85 | 53\% | 0.1 |
| Fearfulness | 130 | 52 | 40\% | 78 | 60\% | 0.7 |
| Tonsillitis | 84 | 41 | 49\% | 43 | 51\% | 0.2 |
| Panosteitis | 75 | 45 | 60\% | 30 | 40\% | 0.001 |
| Heart murmur | 75 | 37 | 49\% | 38 | 51\% | 0.1 |
| Cardiomyopathy | 72 | 45 | 63\% | 27 | 38\% | <0.0001 |
| Aggressive to humans | 72 | 44 | 61\% | 41 | 39\% | <0.0001 |
| Hypothyroidism | 70 | 34 | 49\% | 36 | 51\% | 0.2 |
| Spondylosis | 65 | 26 | 40\% | 39 | 60\% | 0.9 |
| Bloat without torsion | 64 | 19 | 30\% | 45 | 70\% | 0.05 |
| Ectropion | 58 | 30 | 52\% | 28 | 48\% | 0.08 |
| Cataracts | 53 | 12 | 23\% | 41 | 77\% | 0.006 |
| Osteosarcoma | 49 | 18 | 37\% | 31 | 63\% | 0.6 |
|  |  |  |  |  |  |  |

Male Great Danes were significantly less likely than females to have acne, bloat without torsion and cataracts. Males were also significantly more likely than females to have panosteitis, cardiomyopathy or aggressiveness toward humans.

Table 18: Common Health Problems (> 3\%), by Color Family with Hip Dysplasia and Ectropion Included as a Special Interest

|  | Harlequin | 39 | 9\% | 409 | 91\% | 448 |  |
|  | Black | 26 | 11\% | 210 | 89\% | 236 |  |

Fawn family=fawn or brindle
Harlequin family=harlequin, merle, white, mantle, black and white, all other harlequin variants Black family=blacks from black breeding and blue.
${ }^{(a)}$ Fourteen dogs were missing data on color.

The data presented in Table 18 correspond to those in Table 17, except the various conditions have been rearranged to group them by body system. Bloat with or without torsion, tonsillitis, heart murmur, hypothyroidism, spondylosis, ectropion and symptomatic hip dysplasia are significantly associated with color family. Fawns are more commonly reported to have tonsillitis and bloat without torsion than the other two color families. Black family dogs are more likely to have hypothyroidism. Harlequins are less likely than the other color families to have bloat with torsion and heart murmurs. Harlequins are more commonly reported to have spondylosis, ectropion and hip dysplasia with symptoms than the other two color families.

| Train for show ring |
| weight pulling, tracking |

## Table A2: Other foods used in the household (questions 7 and 8)

| Other Dog Foods |
| :--- |
| add raw bones \& veggies |

added raw meat/bone meal \& veggies
added: cooked chicken or beef; cheese
AFS meat
Beef
beef \& chicken daily
boiled chicken/hamburger
brown rice, organic chicken, veggies all cooked
brown rice/chicken/veg's
canned veggies \& fresh cooked
chicken \& rice wet food
chicken leg \& thighs - pressure cooked
chicken thighs
cook for them
cooked chicken
cooked chicken \& cottage cheese
cooked chicken, pork, beef
cooked organic white \& brown rice, organic chicken, carrots, spinach \& garlic
cooked veggies \& chicken
dry \& boiled chicken w/ steamed veggies
dry rice, turkey, vegs
dry w/ wet added
egg yolk \& 1 tbsp oil $3 x$ week
freq. Steam broc. \& bake squash added to food
fresh carrots \& green beans
fresh chicken pressure cooked
fresh cooked chicken

| Fresh meat/chicken-cooked |
| :--- |
| fried chicken livers, hot dogs, sausage, cottage cheese, rice, potatoes |
| Fruit |
| ground beef \& rice (cooked \& frozen) |
| hamburger, cottage cheese |
| holistic dry \& raw meat |
| home cooked |
| home cooked chicken stew |
| home cooking |
| home cooking |
| homemade stew |
| homemade stew of ground turkey \& chicken hearts \& gizzards w/ dry kibble |
| human food |
| human food |
| IVD for allergic dog |
| leftovers from table |
| meat added w/kibble |
| minimal cooked |
| mixed vegetables, ground beef |
| mixture w/rice, beef, yogurt |
| natural balance, solid gold, buckaroo beef |
| Nutri |
| Occasional table scraps \& treats |
| owner lists table food fed 3 times a day |
| pet botanics-lamb \& brown rice |
| plain yogurt |
| Plus 1/8 baked chicken w/ bones |
| raw apple cider vinegar |
| raw beef |
| raw chicken and liver mixed with rice, pasta, \& kibble |
| Rice \& Chicken gizzards |
| rice \& liver/chicken added |
| Science Diet C/D |
| scrap veggies, meat, pasta |
| Scraps |
| scraps, etc |
| small amount of leftovers |
| small amount of table scraps |
| soak dry kibble till it puffs |
| Solid Gold treats, DVP Lamb \& Rice Roll |
| some par cooked ground chicken |
| some raw around meat |
| steak, chicken, ham |
| super premium kibble \& meat veggie |
| table food |
| table food |
| table food - meat/veggies; no fried foods |
| table food mixed w/kibble |

| table food-broiled salmon or cheese |
| :--- |
| table leftovers-meat\&vegs |
| table scraps, fruit, etc. |
| Vegetables |
| Yogurt |
|  |
| Other Puppy Foods If Use Different than Adults |
| add pup food after 9 months |
| adult foods nutritionally suited to puppies |
| adult kibble w/o yogurt, cheese, etc |
| adult premium kibble w/some ground beef |
| AFS raw meat |
| always 23\% protein or less |
| bil jac puppy |
| Bil-Jac puppy |
| biljac w/ goats milk then puppy kibble til 6 mo |
| but lower protein levels |
| but, large breed puppy |
| canned \& dry til 12 wks |
| chicken broth, goat milk, small kibble, baby gerber rice |
| DAD'S |
| Diamond puppy up to 6 mo |
| different brand, protein level-Eagle |
| different brands of kibble than the adult |
| dry kibble - different brand: lower protein as pedigree adult not puppy |
| dry kibble moistened |
| dry kibble only (Eagle Natural) |
| dry puppy chow |
| dry with different protein levels |
| Eagle |
| Eagle blue bag |
| Eagle kennel Pak for 1st 12 mos. |

| yogurt/prozyme |

## Appendix for Part 2: In some cases the number of "other" listed in the main report will be greater than the number of problems listed if respondents did not "specify" the type of other problem. The responses have been left where the respondents filled them in even if they might seem to belong in a different disease category.

Table A4: Other problems listed for Eyes and Ears

| Other eye/ear disorders |
| :--- |
| 3rd eyelid |
| allergies |
| bilateral corneal dystrophy |
| Blind |
| Blind from accident |
| blocked tear ducts |
| chronic ear infection |
| chronic ear infections |
| chronic eye infections |
| curled cartilage of nictitating membrane |
| detached retina \& swelling |
| droopy eyes |
| droopy eyes |
| dry eyes |
| dry eyes \& allergies |
| enopthalmos |
| fractured pupi/partial blindness |
| HAWS |
| ingrown lash |
| Near sighted |
| Pannus |
| partial blindness |
| Possible cherry eye |
| posterior lenticonas |
| small skin on eyeball |
| small tumor under 3rd eyelid |
| synechia |
| waxy build up in ear |

## Table A5: Other nervous system problems

| Other nervous system problems |
| :--- |
| allergy to bee sting-collapsed |
| cracked vertebrae in neck |
| head shakes back and forth |
| lost control of urine \& bowel |
| lost coordination in rear-erosion of sheath around nerves |
| occasional neck pain |
| occasional neck pain |

| pancreas shut down |
| :--- |
| poisoned by flea spray, was detoxified, never the same |
| slipped disc |
| spinal degeneration |

| Other muscle and skeleton problems |
| :--- |
| $30 \%$ short femur |
| ACL tear; surgery |
| back pain |
| backbone bridging |
| blown ACL |
| blown cruciate ligament |
| bone cancer |
| breast cancer |
| calcinosis circumscipt |
| calcinosis circumscripta |
| Club foot |
| down on paterns |
| Elbow fluid (sacs) |
| Epiphysitis |
| Food - dry wheat allergy (hives) |
| injury crushed 2 vertebrae at head/neck |
| low platelets, blood clotting disorder |
| mastitis |
| megaesophagus - adult onset |
| missing adult tooth - never got it |
| missing several discs in spine |
| muscles on head sunk in |
| neck problems-slipped/pinched disk |
| neuropathy in spine |
| overbite |
| partial torn ligament (lft knee) |
| perferated lung from cyst |
| pinched nerve in neck |
| poss. torn knee ligaments |
| problems from dislocated hip |
| ruptured ACL |
| ruptured cruciate |
| Skin problems |
| soft tissue - shoulder |
| spinal injury |
| sudden rear paralysis |
| Torn ach cruciate ligament |

Table A6: Other muscular and skeletal problems
blown cruciate ligament
bone cancer
breast cancer
calcinosis circumscipt
calcinosis circumscripta
Club foot
down on paterns
Elbow fluid (sacs)
Epiphysitis
Food - dry wheat allergy (hives)
injury crushed 2 vertebrae at head/neck
low platelets, blood clotting disorder
mastitis
megaesophagus - adult onset
missing adult tooth - never got it
missing several discs in spine
muscles on head sunk in
neck problems-slipped/pinched disk
neuropathy in spine
overbite
partial torn ligament (Ift knee)
perferated lung from cyst
pinched nerve in neck
poss. torn knee ligaments
problems from dislocated hip
ruptured ACL
ruptured cruciate
Skin problems
soft tissue - shoulder
spinal injury
sudden rear paralysis
Tear of meniscus of ACL
Torn acl
Torn ACL (rt rear leg)
Torn cruciate ligament
Torn cruciate ligament

Torn cruciate ligament
Underbite
weak cruciate
weak rear

| Other endocrine problems |
| :--- |
| Adult hypoglycemia |
| autoimmune thryroiditis |
| autoimmune vaccine related |
| Cushing syndrome |
| cushings |
| diabetes insipitus |
| edema |
| endocrine |
| food allergy to chicken |
| food allergy-chicken |
| inability to gain weight past 105 lbs |
| liver disease |
| overweight |
| pancreatitis |
| prostate enlargement |
| thyroid carcinoma |

## Table A7: Other endocrine problems

| Other blood problems |
| :--- |
| autoimmune hemolytic |
| autoimmune thrombocytopenia |
| caught distemper in breeding from male. Lost all pups |
| immune system deficiency |
| Leukemia |
| penial bleeding |
| positive titers for RMSF |
| Pyometra |

Table A8: Other blood problems

Table A9: Other infectious or immune problems
Other infectious or immune problems
abscessed molar

| actinomycosis - 2 episodes |
| :--- |
| Allergies |
| allergies - hives |
| aspriate pneumonia |
| autoimmune |
| autoimmune |
| autoimmune hemolytic |
| autoimmune problem |
| blastomycosis |
| Bronchitis |
| chronic allergies |
| chronic urine infections |
| ear infections |
| frequent idiopathic fevers |
| immune system allergies/hormonal |
| infection from lick granuloma |
| kennel cough |
| kennel cough |
| kennel cough |
| kennel cough went to pneumonia |
| lime disease |
| liver abcess |
| Parvo |
| Pneumonia |
| pneumonia |
| recurrent ear infections |
| recurring sever hives |
| Sinus-from head injury as pup |
| SLE |
| swelling of lymph nodes from allergies |
| vaginal - during \& before heat cycles |
| valley fever became autoimmune |

## Table A10: Other renal or urinary problems

| 5 mo urinary tract infection |
| :--- |
| Amyloidosis |
| Bladder |
| bladder infections |
| bladder infections |
| chronic renal failure |
| chronic UTI's |
| crystals in bladder |
| crystals in urine |
| cysteine bladder stones |
| difficulty urinating once catherized |
| dilute urine, excessive urination |
| Incontinence |
| Incontinent |
| kidney failure |
| kidney infections |
| kidney liver failure |
| kidney stones |
| occasional bladder leakage |
| puppy cystitis |
| renal failure |

| renal failure due to Addison's disease |
| :--- |
| scarred kidneys |
| SLE - renal disease |
| slight bladder infections |
| torsion |
| urinary tract infections |
| UTI |

## Table A11: Other heart problems

Other heart problems
arrythmia w/ normal echo
atrial fibrillation (7 times)
AV node block
congestive heart failure
endocarditis
enlarged heart
fatal heart attack
heart arrythmia
heart attack
heart attack
heartworm
heartworm
irregular heart beat
small heart
stroke
tachycardia
tumor grew into heart muscle
tumor on heart
valley fever = coccidiosis
very irregular heart beat; would not stabilize

## Table A12: Other types of cancers

| basal cell |
| :--- |
| benign tumor removed |
| bladder |
| bone infection |
| brain |
| brain |
| cancer of toe - amputated |
| cancer on arm \& leg |
| carcinoma - uterogenic |
| chondrosarcoma |
| colon |

| colon cancer, melanoma of the mouth |
| :--- |
| Cushing disease |
| Cyst |
| cysts |
| elbow |
| fat cell/benign/back |
| Fatty tumors |
| Hemangiosarcoma (8 times) |
| intestinal |
| intestinal lymphoma |
| kidney |
| kidney |
| lipomas |
| Liver |
| Liver |
| Liver |
| lymphoma |
| Mast cell tumor |
| melanoma armpit |
| melanoma toe |
| melanoma under arm |
| melanosarcoma |
| on heart \& elsewhere |
| Oral |
| oral melanoma |
| possible in spleen |
| possible liver cancer |
| pre-cancerous tumor on tail |
| prostate cancer |
| rt shoulder mastocytoma grade II |
| salivary gland |
| skin cancer on penis area |
| skin masses |
| small benign mass on breast |
| small growth on nipples |
| soft tissue mass filling sinus cavity |
| spinal tumor |
| spleen |
| spleen |
| stomach cancer |
| subcutaneous hemangiosarcoma |
| Testicular |
| thesticular cancer |
| tumor on underside of jaw-removed |
| tumor w/in spinal column |

## Table A13: Other skin problems

| Other skin problems |
| :--- |
| assorted fatty tumors |
| benign fatty tumor |
| calluses |
| chronic interdigital cysts |
| chronic interdigital cysts |
| chronic skin sores |
| cyst - early onset |
| cysts when older |
| demodex mites |
| Dry, flakey skin |
| easily sunburn on nose and scrotum |
| elbow irritation \& swelling |
| elbow irritation \& swelling |
| elbow pressure point irritation |
| fatty tumors |
| fatty tumors |
| fatty tumors |
| Follicular dermatitis |
| follicular hematoma |
| food allergy |
| furunculosis |
| grain intolerance |
| histiocytoma |
| Hot spots |
| Lick granuloma |
| loses coat in winter-can't be shown |
| lumps |
| multiple fatty cysts |
| patchy temp. hair loss |
| ringworm |
| sebaceous cysts |
| several sebaceous cysts on nipple tissue |
| severe lick granulosa |
| superficial pyoderma |
| testicles sensitive to sun |
| Warts |

## Table A14: Other temperament problems as reported to be problems by respondents

## Other temperament problems

afraid of trains/trucks
alpha male
fear aggressivenes as blindness \& deafness increased fearful of thunderstoms after being in a tornado
hyper but sweet

| manic barking for no reason |
| :--- |
| not a loner - constant attention |
| Protective |
| protective of home |
| pushy pup |
| separation anxiety |
| separation anxiety |
| separation anxiety |
| separation anxiety, high strung |
| Shy |
| shy around men |
| shy with strangers |
| shy, but not socialized till 2 yrs old...now fine |
| strange men |
| submissive peeing; was abused when acquired him |
| vocal - in wanting to communicate |

## Table A15: Other gastrointestinal problems

| Other gastrointestinal problems |
| :--- |
| acid reflux - indigestion |
| Bloody diarrhea |
| Cancer - met. From ovaries |
| chronic diarrhea |
| chronic diarrhea |
| Clostridium perfringens |
| distended stomach \& cramps (no bloat) |
| HEG |
| irritable bowel |
| irritable bowel disease |
| irritable bowel syndrome |
| irritated bowel syndrome |
| lack of appetite/chronic diahrrea |
| lactose intolerant |
| pancreas |
| pancreatitis |
| Parvo |
| prophylactic gastropexy |
| sensitive stomach |
| sometimes gassy |
| Spleen torsion |
| Spleen torsion |
| Spleen torsion \& removal |
| spleenic torsion |
| splenic torsion |
| stomach tumor |
| tack intestines |

tacked stomach at 1 yr
tacked stomach at 1.5 for prevention
torsed spleen
Torsion
torsion of the spleen w/o bloat
torsion w/o bloat
twisted spleen/bloating
used to vomit bile daily, now vomits food now and again; treat w/ Tagaret \& Sucralfate
whipworm infection, severe
yeast in intestinal tract

Table A16: Other male specific health problems (section A)

| Other male health problems |
| :--- |
| 2 infections |
| bleeding form the penis from contact |
| Cryptorchid |
| dead sperm |
| decrease sperm count |
| fragile sperm - won't chill or freeze |
| had one undescended testicle prior to neuter |
| infection leading to decrease sperm |
| low libido |
| low sperm count |
| only one testicle |
| penial bleeding |
| prostate cyst |
| testicular degeneration |
| testicular infection |
| too small |
| undescended testicles |
| undescended testicles |
| undescended testicles |
| urinary infections |
| urinary tract infection |
|  |

## Table A17: Other female specific health problems (section B)

| Other female problems |
| :--- |
| Cancer |
| chronic discharge |
| chronic discharge \& infections |
| chronic discharge \& infections |
| compromised uterus |
| cyst on ovary |
| Cysts in uterus |
| do not breed due to blood disorder |
| endometreosis |
| failure to tie dog bred by implant |
| False pregnancies |
| False pregnancies |
| fetal resorption |
| found to be displastic by x ray at 2 yr |
| Heart murmur, not breedable |
| Large tumor |
| low progesterone levels during pregnancy |
| Mastitis |

| mastitis from false pregnancy |
| :--- |
| mastitis; cysts \& growths |
| milk cysts |
| mycoplasma |
| ovaries caudally located, intermitant hyperplasia uterus |
| retained placenta on 1 breeding |
| split heat |
| timing |
| unable to carry litter to term |
| uterine ertia |
| uterine herpes |
| vaginal discharge/vaginitis |
| vaginitis after every heat |

## Table A18: Other puppy problems (section C)

| Other puppy problems |
| :--- |
| 2 osteosarcoma, 1 mouth cancer |
| abnormality of feet - webbed |
| albino-not deaf, blue merle-kinked tail, 2 harlequin- |
| all pups were premature possibly due to beta strep infection |
| anemia; ruptured umbilical cord |
| Aneurysm |
| approx 6 puppies in 1st litter were not saved (placenta separation) |
| Autism |
| blind cloaca |
| Bloat |
| bloat w/torsion; upper respiratory failure |
| brain tumor |
| Cataracts |
| cherry eye |
| cherry eye, umbilical hernia |
| deaf \& blind in one eye |
| deaf puppy |
| deformed front leg |
| diaphramatic hernia - died under anesthesia for ear crop |
| died accidentally |
| dome head |
| Dysplasia |
| Ectropion |
| entropion - 2 CD litter all 7 puppies |
| eye defect |
| failed OFA certification |
| failure to thrive, eye defects |
| hare lip; split nose |
| heart disease |
| heart murmer, cancer |

[^0]:    ${ }^{(a)}$ Conceived/Conception refers to a confirmed pregnancy by palpation or ultrasound.
